Location: DE Berlin

01.07.2023 - 30.09.2023

Historical Quarterly Impact Reflection Questions

For the quarter, WHAT are the top 2-3 ways you created impact?

Manager Evaluation

Response:

Employee Evaluation

Response: My main commitment this quarter was onboarding. I focused on getting familiar with the existing data stack at Vinted and the jobs which existed in the Growth domain. While going through the onboarding, I constantly thought about how to improve the process. During this process I attempted to create supplementary documentation to support other new joiners with their onboarding. An example of this is the additional documentation for DBeaver, under "Guides" in our warehouse jobs repository. I took notes on the onboarding document to suggest avenues for improvement too. This will help others have a similarly positive onboarding experience to mine. This quarter, I sought to improve documentation quality and visibility. Some examples of this are the freshness alerts for a job (ItemFeedbackUploadBatchView) in Looker and a drill down as a Jupyter Notebook. I have also actively contributed to reviewing pull requests (PR) on the "lookml" repository, giving comments (example in this PR) on how we can improve our Looker user experience. This helps other new non-technical users to acquaint themselves with our data more easily.

For the quarter, WHAT are the top 2-3 ways this team member created impact?

Manager Evaluation

Response: Jeremy has joined Vinted during the third week of August, which has left him 6 weeks in this quarter. During this time, Jeremy has onboarded to the data stack, infrastructure, processes and also worked on a few projects already: Email verification dates

Employee Evaluation

Response:

investigation. This was the first project that Jeremy has worked on and it started almost straight after joining. Jeremy was very independent and onboarded to the project very quickly, did not struggle in stakeholder management. The output of this project now lets us track metrics related to email verification correctly and also it gave more visibility on the cases, where data might be incorrect - having this is extremely helpful in order to minimise legal risks.HVF dimensions. This project was more of an ad hoc, which became a priority at the time when Jeremy has joined. During this project Jeremy again has shown his stakeholder management skills - he was able to gather input from various stakeholders independently, summarise it and act accordingly. In addition to that, he did an extra step by investigating newly created dimensions and summarising the findings that may be relevant for the product.Jeremy has also contributed in maintaining high quality of data changes in Growth Domain by actively checking other's PRs, also updating documentation in confluence for everybody across organisation.

For the quarter, WHAT are the 1-2 things you missed having the impact you intended?

Manager Evaluation

Response:

Employee Evaluation

Response: I would have liked to be able to move faster on the topics to drive change in a faster and more agile way. This was slower because the waiting times and responses were longer than I anticipated. This can be addressed with planning and better communication to stakeholders to block their time so that we can get quicker turnaround times on some of the tasks. However, I believe we are moving at a good pace to start.

For the quarter, WHAT are the 1-2 things the team member missed having the impact you expected?

Manager Evaluation

Response: Both tasks that Jeremy has worked on are not finished entirely, because projects quite heavily depended on the time that other people could allocate. For the next quarter we should consider working on projects that would take more time to gather requirements

Employee Evaluation

Response:

from stakeholders at the beginning and move on with other projects later on.

Share 1-2 ways on HOW you demonstrated the Vinted values in the way you created impact (If needed, refer to the Career Level Framework for how these may look for your level)?

Manager Evaluation

Response:

Employee Evaluation

Response: Scope & Complexity: I was able to work independently and proactively on day-to-day activities, and applied knowledge to solve problems (e.g. freshness issues) in a creative way within the team. Alignment & Collaboration: I was able to partner different stakeholders within Vinted on different topics, in different functions and teams, to scope requirements and solicit feedback. I also helped to facilitate an alignment amongst the different stakeholders (e.g. on HVF dimensions).

Share 1-2 ways on HOW this team member demonstrated the Vinted values in the way they created impact (refer to the Career Level Framework for how these may look for the person's level)?

Manager Evaluation

Response: We take ownership. I was impressed by Jeremy's stakeholder management and independency - really quickly after joining he has started working on projects, where he has managed stakeholders himself without me being involved at all. We care. Jeremy is very approachable, a team player, where he is not afraid to share his point of view. During the prioritisation exercise, he was active, engaged, which made the whole exercise significantly easier for others.

Employee Evaluation

Response:

Looking forward, share 1-2 ways you would like to improve in HOW you embody the values (refer to the Career Level Framework as needed)?

Manager Evaluation

Response:

Employee Evaluation

Response: Decision Making & Judgement: I would be happy to begin to make decisions which may impact the broader Growth Domain, in topics that are within the scope of analytics engineering.

Looking forward, share 1-2 ways you would like to see the team member improve in HOW they embody the values (as needed, refer to the Career Level Framework)?

Manager Evaluation

Response: It is hard for me to think of an improvement this early, since Jeremy has worked on a few projects. In the future, as Jeremy gets more familiar with Domain and organisation, I would expect that he will be able to find stakeholders independently, meaning that he will know who specific information would be relevant (team, domain, people).

Employee Evaluation

Response:

Based on what was agreed throughout the quarter, summarise the Impact you had OVERALL?

Manager Evaluation

Response:

Employee Evaluation

Response: In this quarter, we agreed to focus on onboarding and getting familiar with Vinted's processes. I was able to do that, while constantly thinking of ways to improve the status quo. There were a few initiatives I contributed to help improve the user experience of our data tools.

Based on what was agreed throughout the quarter, summarise the Impact the team member had OVERALL?

Manager Evaluation

Response: This quarter was meant for onboarding, which was done by working on specific tasks. I evaluate this quarter as successful - Jeremy has worked on important projects for domain, independently worked with stakeholders, was active in the team even on topics without a lot of background. Also he was able to quickly pick up some of AE responsibilities: checking PRs, commenting them to ensure high quality standards.

Employee Evaluation

Response:
