Comment: Thank you for the kind words and the comments. This is only possible through the supportive environment and good leadership which the team has. I am very grateful.

Annual Impact Reflection

Summarise the overall impact made this year

- What was achieved?
- What was missed?
- How were the actions aligned with Vinted values?

Manager Evaluation

Response: **What was achieved?**
In Q1, you owned the development of HVF models and metrics on the Marketplace side, delivering on more progress than was realistically expected, despite some minor hiccups.
From Q2 onward, you were part of VGo and worked closely with VGo Finance and Group Finance teams. Throughout the year, you repeatedly proactively identified impactful projects, took initiative to turn your ideas into plans with buy-in from your stakeholders, and fully independently implemented them end-to-end. Such degree of independence and awareness exceeds the expectations of an IC2. In particular, you **dramatically** increased the observability capabilities over VGo Finance data by building marts and

Employee Evaluation

Response:

several self-service dashboards which provide detailed insights into data quality. Finance teams are now enabled to track data quality and act on issues without any required intervention from DSA. These dashboards are extensively used by both VGo Finance and Group Finance teams, and you received very high praise and recognition from both teams on the amount of time and manual effort they now save, and on the confidence in the data that they have gained through them.

You identified that our tests on financial data were inconsistent after the migration, and developed a new testing strategy for financial data at VGo, taking a very pragmatic approach by segmenting tests by their impact/risk. This has increased our ability to catch pipeline-breaking changes earlier on, while allowing us to decrease the main pipeline runtime by 40%.

You contributed to Data Platform initiatives and codebase, mostly the LookML

Generator project, where you were actively involved from early on and helped steer some of the design decisions, and later on through hands-on testing, technical documentation and code reviews, and by taking the lead on rolling out the generator to all VGo projects.

What was missed?

An area for improvement revolves around the management of technical debt and performance optimisations: while you took such projects on and identified good solutions, you still needed nudging to do this proactively. Similarly, you did not consistently consider performance considerations when building new models; in part due to that vgo_finance has the lowest incremental-model rate across all of our projects. Financial pipelines are also amongst the most expensive ones across all VGo which is directly linked to that, as well.

How were the actions aligned with Vinted values?

You are very driven to achieve the best outcomes possible.

You continuously identified areas for improvement, be it in the code, in team and cross-team process, in documentation, and

ensured these are prioritised. You are able to set your own roadmap and plans while ensuring they are fully aligned with your stakeholders' goals and ambitions. Your attitude is one of the best examples of consistently 'taking ownership' I have seen.

You continuously identify opportunities for co-creation and facilitate it. Most recently, you took initiative to bring together VGo DSA, VGo Financial Operations and Group Finance teams together (which had not really occurred before). The workshops were overall a great success and you were praised by everyone involved for the valuable insights it produced and relationships it helped build. Such degree of taking initiative and taking ownership is generally not expected of an IC2.

An area for improvement is your focus. Your desire to help others sometimes (too often) gets you involved in too many topics, discussions, and ad-hoc projects, which eat up the time you can spend on impactful and agreed-upon projects.

What aspects of growth would you like to acknowledge and celebrate?

Manager Evaluation

Response: You consistently aim high and are very conscious of your own growth. While working on a given project, you proactively seek learning opportunities that help you grow and develop your skills. For example, while automating the notebook script for extracting data from an API, you identified an opportunity to both improve the code while also learning more about best-practices of object-oriented programming in python. You sought out feedback from more knowledgeable team members and ended up building a pipeline which was a lot more mature than the initial design. You will apply a similar learning mentality to most projects you're working on, if possible (i.e. if there's time).
This attitude has helped you grow your technical skills (i.e. python) this year.
