Historical Quarterly Impact Reflection Questions

For the quarter, WHAT are the top 2-3 ways you created impact?

Manager Evaluation

Response:

Employee Evaluation

Response: This quarter was marked by stabilisation and onboarding activities - of myself to Vinted Go's data set-up, to the new workflow with the LookML Generator, and of our Vinted Go Finance teams' stakeholders to our Dataverse set-up, completed by the migration team. Some personal highlights include:1. Raising the data observability of invoice uploads. I raised the data observability of invoice uploads, expediting the feedback loop for our finance stakeholders. This enhancement provides a comprehensive overview of carrier invoice specifications, identifying duplicates, new categories, and unmatched invoice rows. As a result, we can make better assessments of externally-provided information, improve the accuracy of our reported data, and challenge carriers more promptly when discrepancies arise. This improvement facilitates the finance operations and data control teams to perform their tasks more efficiently, ultimately saving time. The report is now shared weekly, allowing for swift triage and escalation.2. Working to introduce the LookML Generator workflow for Vinted Go and exposing Looker models. I took ownership of introducing the LookML Generator workflow for Vinted Go and exposing Looker models. This quarter, I supported fellow Analytics Engineers in implementing the LookML Generator across their respective domains. For Vinted Go Finance, we rolled out all Dataverse models to Looker, complete with detailed descriptions, dimensions, measures, and formatting. Additionally, I conducted a session to induct other Vinted Go DSA colleagues into this new workflow. This

presentation was also shared with other domains (Buyer, Seller, Payments, Competitive Intelligence, etc.) for further internal dissemination. My contributions included proposing ideas, improvements, and fixes to the LookML Generator, thereby enhancing the developer experience for the entire DSA team.3. Implementing proactive and detective testing strategies to improve data control. Together with Justina, I implemented advanced column-level data controls across various points of the Vinted Go Finance data model. These controls ensure that the data underpinning our models is reliable and meets expectations. For instance, we enforced the presence of values for join keys (not null and unique). This strategy has improved the reliability of data produced from the nightly pipeline and increased stakeholder trust in the data.

For the quarter, WHAT are the top 2-3 ways this team member created impact?

Manager Evaluation

Response: Q2 marked the first 'full' quarter for you at Vinted Go. You onboarded quickly and started taking ownership in your domain of responsibility in a short amount of time. Over the course of the quarter, there were a few main areas where I think your impact was most pronounced: Creating automated self-service reporting and alerting solution for your stakeholders. These include the data quality dashboards you built as well as the support you otherwise offered to the team to allow them to take matters in their own hands (e.g. writing templated queries they can run on BQ). The impact of those is quite significant, as was evident from the Instant feedback you received from colleagues and through my own observations in slack and direct conversations with our stakeholders. Overall, these efforts have improved the visibility quite a bit! You proactively supported the team working on the LookML generator with lots of feedback and also direct contributions to the implementation, and you helped roll it out across VintedGo (by providing support, documentation and presenting in knowledge sharing sessions). The LookML generator helps standardise things so indeed it's been great seeing you

Employee Evaluation

Response:

take the lead in enabling its adoption in our BU! You took over the very-basic VGOFIN project I had set up and brought it to the next level - through automation, documentation and user onboarding you created a very transparent and easy to navigate board which is now used daily by all teams and has visibly reduced ad-hoc slack communication and information being lost in random threads.

For the quarter, WHAT are the 1-2 things you missed having the impact you intended?

Manager Evaluation

Response:

Employee Evaluation

Response: The initial testing strategy was overly stringent, causing the pipeline build to fail in the early weeks of implementation. Consequently, we were unable to deliver data within the agreed service-level timeframes. These issues often required considerable time to fix, delaying the start of the refresh. In Q3 2024, I plan to reassess the testing strategy to strike a balance between proactive data quality monitoring and the materiality of errors, ensuring that builds fail only in cases of significant issues (e.g. if join keys are not unique and will cause massive duplications).

For the quarter, WHAT are the 1-2 things the team member missed having the impact you expected?

Manager Evaluation

Response: The main problem area I see currently in your (shared) area of ownership is that the DAG fails too often. That being said, our stakeholders still seem very happy with the much improved observability and overall quality and since we do not get new data on a daily basis, sometimes these failures do not really have a negative impact on stakeholders. That being said, we should revisit the causes (I think mostly tests failing) and find ways to reduce the alert fatigue.

Employee Evaluation

Response:

Share 1-2 ways on HOW you demonstrated the Vinted values in the way you created impact (If needed, refer to the Career Level Framework for how these may look for your level)?

Manager Evaluation

Response:

Employee Evaluation

Response: We take ownership: Justina and I have swiftly taken over the ownership of the Vinted Go Finance data space, addressing

concerns and questions from finance stakeholders. We have taken full responsibility for their experience with the data platform and ensured effective interaction. This proactive approach allowed the migration team to transition smoothly to other roles. Additionally, I supported the Programs DSA team with their Analytics Engineering requests and handled matters related to HVF, ensuring seamless operations across different domains. We co-create: In collaboration with the migration team, finance stakeholders, and fellow analytics engineers, I have developed dashboards, models, and pipelines that have significantly enhanced the efficiency and speed of our work for Vinted Go Finance. By working closely with the data platform team, I suggested improvements to the LookML Generator, benefiting all DSA users and fostering a more collaborative and innovative environment.

Share 1-2 ways on HOW this team member demonstrated the Vinted values in the way they created impact (refer to the Career Level Framework for how these may look for the person's level)?

Manager Evaluation

Response: Primarily, I would like to highlight taking ownership and aiming high as the key values you continuously demonstrate. You are very, very proactive (as also confirmed by the feedback you received from stakeholders and colleagues) and are always on top of the situation. You raise issues proactively with your stakeholders and team members, communicate clearly and timely (be it regarding issues, new features, changes etc.). You are very engaged and driven and consistently and continuously look for new ways to improve the data quality or the visibility of it to users and yourself. This quarter you also co-created, in particular with the Data Platform team (LookML generator) and with Justina within the vgo_finance project.

Employee Evaluation

Response:

Looking forward, share 1-2 ways you would like to improve in HOW you embody the values (refer to the Career Level Framework as needed)?

Manager Evaluation

Response:

Employee Evaluation

Response: We care: I aim to spend more time building

connections with my stakeholders. While our current collaboration is effective, there is room for deeper understanding and improved partnership. By actively listening and asking more insightful questions, I hope to understand their struggles better and become a more effective business (data) partner, ultimately aiding their work more efficiently.

Looking forward, share 1-2 ways you would like to see the team member improve in HOW they embody the values (as needed, refer to the Career Level Framework)?

Manager Evaluation

Response: Nothing really comes to mind.

Employee Evaluation

Response:

Based on what was agreed throughout the quarter, summarise the Impact you had OVERALL?

Manager Evaluation

Response:

Employee Evaluation

Response: This quarter focused on onboarding, enablement, and finalising the finance migration. It was a productive period where I introduced several initiatives to empower our stakeholders and enhance their workflows. I also delved into topics such as the LookML Generator, learning and implementing suggestions to improve our developer experience. Overall, the impact was substantial, laying a solid foundation for future improvements and collaborations.

Based on what was agreed throughout the quarter, summarise the Impact the team member had OVERALL?

Manager Evaluation

Response: I would say this quarter was quite successful for you. You have raised the bar in the DSA <> Finance teams collaboration in multiple areas and this has resulted in a much smoother interaction and increased observability (data quality issues) for our stakeholders. Providing users with self-service capability allowed you to then focus on further iterating and improving models and pipelines, which is exactly the right way to be impactful. I'm super happy with your contributions this quarter and really happy to have you on the team!

Employee Evaluation

Response:
