Review previous Individual Goals

- Completing migration,
- CI optimisation,
- Improving data reliability,
- LookML Generator improvements,
- Mentoring VInterns.

See [Google Document](#) for details

Due Date: 30.09.2024      Status: Done      Completion Date:  
Category: Impact Goals

Reflection Question 1

Please provide 2-3 examples of the impact created *this quarter*.

- What was achieved?
- What was missed?
- How did the actions align with Vinted's values?

Manager Evaluation

Response: In terms of your **achievements** this quarter:  
1. You redefined the testing strategy in the vgo-finance space. In this, you created sufficient documentation to create alignment (with Justina, with me), identified an approach that balanced testing frequency

Employee Evaluation

Response: **What was achieved? How did the actions align with Vinted's values?**  
  
This quarter featured a strong emphasis on co-creation with multiple stakeholders and aiming high. This is in the area of improving

and impact of failures. This has helped reduce alert fatigue and generally made test failures more meaningful. This was a great effort and a good example of **aiming high**.

2. You continued to create more self-service dashboards that help Finance team members gain better visibility into the data (e.g. [post-period changes](#) and [price join checks](#)). The feedback on these has been very positive and Finance team members rely on them regularly to gain better insights into data issues.

3. You participated actively in the DSA Academy initiative. This was a great example of taking initiative and finding the time to support the growth of DSA as well as of those colleagues that you helped mentor. As per the feedback from the People team colleagues you worked with closely, you were super engaged and supportive throughout the entire project.

4. You continued to support the development of the LookML generator, mostly through feedback and testing, but also by **taking ownership** in rolling new improvements out across VGo DSA.

5. Last but not least, you supported the Finance team well and closed off many issues and requests that were raised throughout the quarter. It is important not to oversee this, as it by itself is very impactful: making sure that we can quickly implement changes and improvements, especially around the 2 key reporting cycles of the month is a prerequisite to being able to spend time on other topics (such as the ones listed above). You handled priorities and communication very well, as is evident and confirmed by the feedback you've received throughout the quarter. Everyone agrees that your communication is excellent (leading meetings and projects, following up, proactively bringing up issues for discussion). Well done!

In terms of **areas for growth/improvement**: Not so much as 'missed', but you should be more critical of where and how you spend your time. You are active and engaged in many different topics, which either means you have less time to be impactful in your primary domain/area, or you end up working more to achieve everything. Both are

the reliability of our pipeline in VGo Finance, and improving observability over data quality. I also participated in mentoring VInterns for their sustainability project.

In terms of improving the reliability of the pipeline, this involved revising our data space's testing strategy. We wanted to test widely and on the most important things, but did not want the pipeline to fail for trivial reasons as it did previously. Justina and I identified areas where there were frequent failures, and revised the frequencies to test these more often. A [risk-based approach](#) was implemented. This had positive results - that the SLA was achieved on almost all days, and [we managed to detect issues](#) in high-risk areas (sources being Google Sheets) more promptly, averting a failure in the pipeline. In addition, the main pipeline had reduced from 45 minutes to 25 minutes, enabling faster recovery and ensuring only essential tests remained in the main pipeline. This a stark improvement from pre-June, where we tested strictly but the pipeline was failing often 2-3 times a day and causing the SLA to be missed. This solution was possible with the feedback from the team, designed to aim high with a 100% SLA fulfilment rate from the start.

I also optimised the CI pipeline as well. This brought down the dbt runtime by 50% (from 8 mins to 4 mins) and the costs of the test project. This is done by changing the sampling strategy. We ensured that the schemas were respected while reducing the need to have enormous datasets which did not add value. This way, we were ambitious in trying to reduce the time taken for the CI so we could deploy faster.

This quarter, I had also officially started an analysis and high-level awareness of post-period changes in the key data products which were used by finance stakeholders. I had also provided some dashboards which helped them to monitor data quality. (e.g. Price list joins, which impacts the quality of the estimated costs which is used for management reporting. Post-period changes, which impacts the invoiced amounts intra-group). This provided visibility

generally not optimal (and may lead to burnout).

There are various topics that need more attention in the "VGo Finance" area, on a higher level — alignment with Finance DSA on ownership, action plan for keeping vgo-finance production costs in check (they've been growing every month, while other domains are relatively static), taking ownership of the vision of the Finance project [which you've already taken some initial actions on], and more.

To summarise on how your actions align with our **values**:

- **you consistently take ownership** (see examples above and the feedback you've received)
- **you aim high** (see examples above and the feedback you've received)
- **you grow**. You are taking proactive, in-depth and consistent measures to drive your growth in the direction you want.

of the key areas which finance needs for reporting and allows them to have a better grip of the issues which they are facing. I aim to give as much clarity over the data as possible, to allow for self-debugging by our users, and will continue to do so.

Finally, I had also mentored VInterns for their sustainability project. This was a good experience in facilitating discussions as a lead, and giving them insights to the marketplace and shipping nooks and crannies.

### What was missed?

I had initially hoped to be more involved in the development of features for the LookML Generator by writing code, but did not. My involvement was limited to testing and ideation for introduction of measures. I would like to have more hands-on learning for software engineering approaches to improve my quality as a Python developer.

I also noticed for myself that there are some tasks which I would have liked to respond to quicker, but they take longer because they involve inputs from other stakeholders. I would like to be a better coordinator to push for quicker resolutions of topics. For example, these topics could be "why is there a difference between the estimated and actual costs", which will require feedback from the FinOps team, the SPMs, and carriers. I would like to track these issues and their resolutions better so we can close the cases sooner.

## Reflection Question 2 & 3

### How were the insights from feedback and learning applied *this quarter*?

#### Manager Evaluation

**Response:** Based on the feedback you received last quarter:

- positive feedback: you continued to do things consistently (pro-activeness, great communication) through Q3.
- constructive feedback: as was noted by some colleagues, you may have had too many things on your plate at times (in Q2). It

#### Employee Evaluation

**Response:** They were helpful to affirm what what went well, and what I should continue to do. As for learnings, some of the inspiration from a learning conference will manifest into a proposal which can be applicable for Vinted.

is not obvious/clear to me that this is an area that improved significantly in Q3 and I think you can still make progress (also noted in Reflection Question 1).

### Looking ahead, what actions would enhance the impact in the upcoming quarter?

#### Manager Evaluation

**Response:** Putting *even more* emphasis and focus on VGo Finance. I do not mean that you should stop being involved in other topics you find interesting and which help you grow (s.a. LookML generator), but you should strike a better balance than today. There's so much (additional) impact you could make there over the next quarters (in terms of further automating manual tasks performed by the team, improving data quality and reliability, etc.)

#### Employee Evaluation

**Response:** I would continue to enhance my communication to stakeholders, and play a stronger driving role in the initiatives which will emerge.

### Set new Individual Goals

See [Google Document](#).

**Due Date:** 31.12.2024      **Status:** In Progress      **Completion Date:**  
**Category:** Impact Goals

### Inconsistent Impact Flagging

For this quarter, was the team member's impact in line with expectations for their role and Quarterly goals?

Your answer will be visible to your team member once you submit the form, please plan the timing of the form submission and discussion accordingly.

You can click on "Save for later" below to save your draft without sharing visibility to your team member. It is recommended to communicate an Inconsistent Impact Flag during the one-to-one discussion.

Please note that flagging someone as inconsistent is a proactive step to highlight areas where they should course-correct. It's a reminder for leaders to provide additional support to help the team member work towards becoming impactful next quarter.

No automatic processes are initiated from this flag; it is solely for awareness, visibility, and alignment purposes between the team member and the team lead.

Manager Evaluation
