Reflection Question 1

- Please provide 2-3 examples of the impact created *this quarter*.
- What was achieved?
 - What was missed?
 - How did the actions align with Vinted's values?

Manager Evaluation

Response: The 3 key achievements I saw this quarter:
1. Further improved observability and self-service abilities for stakeholders (price list changes, expiration checks, improvements to existing dashboards). These continue to be used by the teams actively and have (likely) saved us many hours of manual debugging and investigations. It's super important that we always prioritise the impact we can deliver to our stakeholders, and it's great to see you're expanding the

Employee Evaluation

Response: **What was achieved?**

Improving the confidence of our stakeholders in our data: This quarter, I focused on improving the trust our stakeholders place in the data used for reporting. I worked on developing additional tests and alerts to monitor different

finance teams' 'arsenal' of self-service dashboards continuously.

2. RoyalMail pipeline: you built this from scratch and took it as a learning opportunity to learn more about OOP; a great example of **aiming high** and **growing** by pushing yourself beyond your comfort zone to expand your knowledge and technical abilities.

3. Suggesting, conceptualising, planning and running 2 workshops with FinOps and Finance. This was a great example of **taking ownership**. You took the whole thing from ideation to facilitation and it resulted in a day very well spent with our stakeholders, in which we (all) learned, co-created and reflected on our collaboration. This has given us a lot of insights on what we should focus on in the upcoming quarters. The "cherry on top" of this achievement is that this was a first such workshop with our stakeholders — there were not previous such forums from which you could draw inspiration. Despite this, you came up with a great format which was engaging and useful.

In terms of things that were missed, you did not get as far with the vgo-finance access management topic as originally planned; we'll probably need to carry over some of this into Q1.

components of the reporting framework. Notable examples include the price list changes dashboard and the check on expiring price lists dashboard. Additionally, I implemented several business logic checks to ensure the accuracy and reliability of the source data. This work involved collaboration with the team to identify useful features and anticipate business requirements, helping to provide more reliable and actionable insights.

Automation of data pipelines using the universal template using Python and SQL: I successfully created pipelines for price list ingestion and Royal Mail API extraction. By building these pipelines within a scalable framework inspired by Junn's approach, I was able to deliver data more efficiently and on time. Another key achievement was the automation of carrier code mapping via SQL, which streamlined processes and reduced the need for manual mapping in Google Sheets. I also simplified the process for our finance stakeholders by updating the source of the no-details invoices, eliminating the need for an external script and improving the workflow for data transformations.

Further alignment of the teams' understanding of each other's processes and priorities: In collaboration with Justina, I co-created and facilitated a workshop aimed at understanding the key concerns and priorities of our stakeholders. The workshop proved to be an insightful exercise, providing us with clear and actionable areas to focus on. It laid the foundation for deeper collaboration within the team as we plan for the upcoming year.

As part of our ongoing efforts to optimise resources, Justina and I identified an underutilised model that was not being used as a view, resulting in a significant cost saving of approximately 24TB in billed query bytes. This initiative highlighted the importance of reviewing our data architecture regularly to ensure efficiency and cost-effectiveness.

What was missed?

There were areas where I had hoped to see a greater impact, particularly with the self-service discovery tool, which was a follow-up from one of the conferences I attended. Ultimately, we decided to deprioritise this initiative in favour of other projects that were more urgent for the stakeholders I work closely with. While this trade-off was necessary, I remain optimistic that in future quarters, I will have the opportunity to revisit and deliver on these initiatives.

How did the actions align with Vinted's values?

We Grow: This quarter, I pushed myself to step outside my comfort zone in two key areas. The first was leading a workshop, something I hadn't done in several years. I believed it would bring value to the team's dynamics, and I'm pleased to see that it made a positive difference. The second area was expanding my technical skills, specifically in developing Python pipelines. It was a steep learning curve, but I'm glad to have gained valuable experience in this area, which has broadened my technical capabilities.

We Aim High: By engaging closely with our stakeholders, I've sought to envision more ways we can strengthen our confidence in the data we work with. I aimed to challenge assumptions and push for proactive testing, ensuring that DSA can identify data issues before they become apparent to our stakeholders. My focus has been on continually raising the bar for the accuracy and reliability of our reporting.

How were the insights from feedback and learning applied *this quarter*?

Manager Evaluation

Response: One thing I've noticed this quarter is that you were more focused. In past quarters I often had the impression that you are juggling many projects simultaneously, which is a sure recipe for burnout. It's good to see that this quarter you more consciously prioritised where you spend your time on, and I hope this also resulted in a less hectic quarter for you.

Employee Evaluation

Response: **Following Up on Feedback:** One of the pieces of feedback I received last quarter was to ensure better follow-up on open issues. In response, I made a conscious effort this quarter to develop a habit of reviewing the Jira board and backlog more regularly. This has helped ensure that no (less) issues slip through the cracks, and it's been a valuable practice in maintaining progress and accountability.

Building on Strengths: I am grateful for the positive feedback I received, particularly around idea generation and my ability to support users in improving their workflows. I'm pleased that these areas are contributing well to the team's success, and I look forward to continuing to build on this strength, helping users better understand the processes and functionality behind the tools we provide.

Looking ahead, what actions would enhance the impact in the upcoming quarter?

Manager Evaluation

Response: You've created and shared quite a few great dashboards/data products by now, but we don't have the highest confidence that all of them are used (i.e. the one you created for SPMs seems like it's not used; there were examples earlier in the quarter of some dashboard that one of the finance teams was looking at but the other was unaware of). Think about what actions you can take to make sure all your stakeholders are not only informed, but also (potentially) enabled and encouraged to use the data products you create. I.e. perhaps beyond sharing a dashboard and documentation, we should do more demos (and maybe refreshers/intros to new-joiners?)

Potentially related to the above: you should work on your communication a bit; specifically: you sometimes go in [a lot] more detail than is necessary, and this may cause you to 'lose' your audience along the way. Concise communication (be it written or verbal) is a sign that you can take (complex)

Employee Evaluation

Response: I believe that co-creating with stakeholders is key to driving success. I look forward to continuing to gain valuable insights through our collaborative efforts, understanding their processes and needs more deeply, and ultimately making their workflows more efficient and effective.

topics and distill them to their essence. It is also generally an important ability to develop as you progress your career.

Inconsistent Impact Flagging

For this quarter, was the team member's impact in line with expectations for their role and Quarterly goals?

Your answer will be visible to your team member once you submit the form, please plan the timing of the form submission and discussion accordingly.

You can click on "Save for later" below to save your draft without sharing visibility to your team member. It is recommended to communicate an Inconsistent Impact Flag during the one-to-one discussion.

Please note that flagging someone as inconsistent is a proactive step to highlight areas where they should course-correct. It's a reminder for leaders to provide additional support to help the team member work towards becoming impactful next quarter.

No automatic processes are initiated from this flag; it is solely for awareness, visibility, and alignment purposes between the team member and the team lead.

Manager Evaluation

Rating: In line with expectations
