

Chia, Jeremy

Analytics Engineer, VGo Analytics Engineering

Manager: Georgi Evlogiev (10689)

Evaluated By:

Q2 2025 Quarterly Impact Reflection

Organization: Georgi Evlogiev (10689)

Location: DE Berlin

01.04.2025 - 30.06.2025

Review previous Individual Goals

Automating data quality triage and responses

- Shipment join failures: Automating reports to assess the issues with shipment join failures. Currently, these still have to be run manually

Due Date: 30.06.2025

Status: Done

Completion Date: 30.06.2025

Category:

Impact Goals

Cost optimisation of VGo Finance

- Propose and start implementing incremental models for main tables in finance - invoice rows, shipment legs cost and revenue.
- Implement required partition filters on bigger tables (incl. communication)

Due Date: 30.09.2025

Status: On Track

Completion Date:

Category:

Impact Goals

Preparation for VIntern to Join (Q3 2025 - 3 Jul 2025)

- Calibrate, align, review, interview VIntern to hire one VIntern
- Finalise projects for VIntern to work on

Due Date: 30.06.2025

Status: Done

Completion Date: 30.06.2025

Category:

Impact Goals

Reflection Question 1

Please provide 2-3 examples of the impact created *this quarter*.

- What was achieved?
- What was missed?
- How did the actions align with Vinted's values?

Manager Evaluation

Response:

Employee Evaluation

Response: This quarter featured tangible improvements in cost visibility and

operational efficiency despite some unexpected challenges. Here are some highlights:

- I delivered a more granular breakdown of shipping costs via dashboards that are now ready for review and merging. This provided the team with deeper insights into carrier route profitability—revealing that 50% of routes are unprofitable—and enabled more informed decision-making. This work aligns with Vinted's values of aiming high and taking ownership by tackling cost optimisation with detailed data.
- Automated shipment join failure alerts were enhanced with clearer error messages, reducing manual triage time and improving data quality monitoring. This initiative demonstrates that we care deeply about data reliability and co-create solutions that ease team workflows.
- Query optimisation efforts included reducing the cost of the most expensive queries and implementing required partition filters to improve pipeline efficiency. These technical improvements reflect a commitment to growth and ownership in maintaining robust data infrastructure.
- As part of preparing for the VIntern's arrival, I drafted a new homework assignment designed to better assess candidates' skills and fit for the role. This updated homework can be reused for future interns, ensuring a consistent and effective evaluation process.

Although Ipshita ultimately did not join the team, these materials provide a strong foundation for future interns and support a smoother onboarding experience moving forward.

Some work was deprioritised, such as expanding implementation details on the cost-reporting models and addressing inaccurate shipment country values, due to urgent unplanned tasks.

Reflection Question 2 & 3

How were the insights from feedback and learning applied *this quarter*?

Manager Evaluation

Response:

Employee Evaluation

Response: Feedback and learning were integrated throughout the quarter to refine processes and outputs:

- Discussions with stakeholders shaped the onboarding materials and project scopes for the VIntern, ensuring alignment with team priorities, even though the onboarding did not proceed as planned.
- Discovering backend changes that caused shipment price list non-joins led to improved communication and escalation protocols to prevent future data surprises.
- User feedback on Profit & Loss dashboards guided clarifications and adjustments to improve usability and accuracy.
- Repeated manual triage of shipment join failures informed enhancements to error messaging and automated alerts, reducing troubleshooting time and manual effort.
- A security vulnerability in the CSV cleaner prompted rapid rollout of fixes and transparent communication with users, showing responsiveness to external risks.

Looking ahead, what actions would enhance the impact in the upcoming quarter?

Manager Evaluation

Response:

Employee Evaluation

Response: Looking forward, I plan to focus on:

- Resuming and prioritising cost-reporting model optimisation, including incremental model implementation to further reduce finance cost drivers.
- Tackling pending data quality issues like inaccurate shipment country values and strengthening proactive data monitoring via enhanced dashboards.
- Continuing to build pipeline robustness through better error handling and alerting to reduce failures and improve reliability.
- Expanding automation in data quality triage beyond shipment joins to cover more failure cases, reducing manual intervention.

- Further optimising expensive queries and cost drivers, aiming for measurable cost savings.

Set new Individual Goals

More automation

Key Results:

- New price list models are validated and integrated.
- Improvements to the cost estimation model (to be discussed with [Samanta Vasilenkaitė](#), [Nikita Chanchikov](#)).
- Switching invoicing of marketplace users from marketplace to Vgo for shipping services

Due Date: 30.09.2025 Status: On Track Completion Date:

Category: Impact Goals

Objective: Cost control for VGo Finance

Context: Costs for VGo Finance's space have grown steadily due to the size of data growing. The daily pipeline costs have increased because the tables are fully refreshed every day. There are opportunities for optimisation, for example, identified in this [RFC](#).

Key Results:

- Implementation of estimated costs in an incremental manner (expected large cost savings).
- Review dashboards, queries which are expensive and determine ways to optimise them.

Due Date: 30.09.2025 Status: On Track Completion Date:

Category: Impact Goals

Objective: Improve observability over key data columns and topics.

Context: We often get ad-hoc queries, tasks, originating from stakeholders relating to issues in data quality (e.g. field is missing, numbers don't look correct). The ultimate goal is that DSA should be proactive rather than reactive to these data quality issues. When a request gets raised, we should learn what the key issues are and try to monitor them.

Due Date: 30.09.2025 Status: On Track Completion Date:

Inconsistent Impact Flagging

For this quarter, was the team member's impact in line with expectations for their role and Quarterly goals?

Your answer will be visible to your team member once you submit the form, please plan the timing of the

form submission and discussion accordingly.

You can click on “Save for later” below to save your draft without sharing visibility to your team member. It is recommended to communicate an Inconsistent Impact Flag during the one-to-one discussion.

Please note that flagging someone as inconsistent is a proactive step to highlight areas where they should course-correct. It's a reminder for leaders to provide additional support to help the team member work towards becoming impactful next quarter.

No automatic processes are initiated from this flag; it is solely for awareness, visibility, and alignment purposes between the team member and the team lead.
