Review previous Individual Goals

Cost control for VGo Finance

Context: Costs for VGo Finance’s space have grown steadily due to the size of data growing. The daily pipeline costs have increased because the tables are fully refreshed every day. There are opportunities for optimisation, for example, identified in this RFC.

- Key Results:**
- Implementation of estimated costs in an incremental manner (expected large cost savings).
 - Review dashboards, queries which are expensive and determine ways to optimise them.

Aim for potential improvements with at least 45 EUR per week; ignore the others
Add estimate to RFC for potential improvement

Due Date: 30.09.2025 Status: Done Completion Date:
Category: Impact Goals

Cost optimisation of VGo Finance

- Propose and start implementing incremental models for main tables in finance - invoice rows, shipment legs cost and revenue.
- Implement required partition filters on bigger tables (incl. communication)

Due Date: 30.09.2025 Status: Done Completion Date: 30.09.2025
Category: Impact Goals

More automation

Key Results:

- New price list models are validated and integrated.
- Improvements to the cost estimation model (to be discussed with [Samanta Vasilenkaitė](#), [Nikita Chanchikov](#)).
- Switching invoicing of marketplace users from marketplace to Vgo for shipping services

Due Date: 30.09.2025 Status: On Track Completion Date:

Category: Impact Goals

More automation

Context: Price List Migration is underway, and migration is expected to occur in Q3 2025. (See channel [#pricelist-migration](#)). Expect to co-drive this with [Justina Šakalytė](#).

Key Results:

- New price list models are validated and integrated.
- Improvements to the cost estimation model (to be discussed with [Samanta Vasilenkaitė](#), [Nikita Chanchikov](#)).
- Switching invoicing of marketplace users from marketplace to Vgo for shipping services

Due Date: 30.09.2025 Status: On Track Completion Date:

Category: Impact Goals

Objective: Cost control for VGo Finance

Context: Costs for VGo Finance's space have grown steadily due to the size of data growing. The daily pipeline costs have increased because the tables are fully refreshed every day. There are opportunities for optimisation, for example, identified in this [RFC](#).

Key Results:

- Implementation of estimated costs in an incremental manner (expected large cost savings).
- Review dashboards, queries which are expensive and determine ways to optimise them.

Due Date: 30.09.2025 Status: On Track Completion Date:

Category: Impact Goals

Objective: Improve observability over key data columns and topics

Context: We often get ad-hoc queries, tasks, originating from stakeholders relating to issues in data quality (e.g. field is missing, numbers don't look correct). The ultimate goal is that DSA should be proactive rather than reactive to these data quality issues. When a request gets raised, we should learn what the key issues are and try to monitor them.

Key Results:

- Creation of dashboard and automated alerts (to DSA) on fields which are crucial and prone to errors, for example reporting carrier, from/to country codes.

- Creation of models to check for potential outliers in data, for example, when marketplace shipments state completion but we do not issue a customer invoice.
- Less requests because of ad-hoc errors (less reactivity).

Due Date: 30.09.2025 **Status:** Done **Completion Date:** 30.09.2025

Privacy Implementation for Finance

Context: We must implement privacy controls as part of an DSA OKR for 2025. More context in this [Slack thread](#).

Key Results:

- Review of fields in VGo Finance for PII, to arrive at a conclusion on how to implement privacy controls. For example, address information, tracking codes, etc.
- Draft proposal for implementation of privacy controls.

*No questions left unanswered in Q3.
 Start asking the questions.*

Reflection Question 1

Please provide 2-3 examples of the impact created *this quarter*.

- What was achieved?
- What was missed?
- How did the actions align with Vinted's values?

Manager Evaluation

Response: Q2
 In Q2, there were two dominant themes you focused on:
 1. Financial data monitoring, quality & observability improvements.
 You improved the shipment join failure alerting, leading to a much more

Employee Evaluation

Response: 1. Cost optimisation in VGo Finance & tool to enable monitoring Looker usage:

 This quarter, I optimised key marts - invoice rows and shipment legs' invoice cost and revenue - by making them

informative alerts with the ability to tag the responsible owners directly. This also involved quite a bit of learning for you as the entire implementation is done in python. This was a great example of aiming high, where you were not content with the capabilities of our default alerting and sought out to implement a more robust feature.

You also implemented a number of other improvements and fixes s.a. facilitating reporting on Verticals, adding required partition filters on large tables. The latter was also done in parallel to analysing user queries which you undertook, and which helped you understand your stakeholders' behavior better. The resulting improvements (i.e. improved queries, dashboard improvements/ performance tweaks) helped improve the efficiency of accessing the data we produce (improved costs in particular). You planned optimisation work for Q3 (<https://vinted.atlassian.net/wiki/spaces/SA/pages/30268260504/2025-06-05+Optimising+VReporting+Models>)

You also implemented various improvements and new features to Looker dashboards, improving further our visibility into costs and carrier profitability.

2.VIntern prep work

Although it did not work out in the end, unfortunately, you had put in all the work to prepare for a very successful internship. This included revisiting existing (and non-existing) interview materials [s.a. the homework assignment] and onboarding materials, ideating on projects and goals and planning out the internship. By the time I left on leave mid-May you had a solid plan on how to proceed, which was also quite flexible: you recognised that the most valuable experience for the intern would vary from one candidate to another, and thus left sufficient room to

incremental, reducing query volume by roughly 1.5 TB of data scanned per day. This work helped stabilise invoiced cost calculations (as visible in [GCP Billing Items](#)) and improved the consistency of reporting across Finance.

There is still room for refinement: frequent full refreshes due to historical changes have limited the full impact of these improvements. I plan to address this by adjusting refresh logic and dependencies in Q4.

In parallel, I analysed large Looker and Google Sheet queries to identify optimisation opportunities. This led to two new internal tools:

- [Model Dependency Checker](#)– enables analysts to identify upstream/downstream impacts when modifying models.
- [Dashboard Usage Monitor](#)– highlights which dashboards and queries are most resource-intensive.

Through this work, I co-created with guild members and aimed high by [gathering](#) early feedback and iterating based on user needs.

2. Contributing to the Progress on Data Catalog Implementation:

I supported the implementation of the Data Catalog through:

- Aligning on owner and domain definitions with stakeholders.

adapt to the intern's career and learning aspirations when planning out their time here. Even though the candidate pulled out at the last minute, the work you did will set us up to try again another time, and have more confidence in our approach.

All in all, no major things were missed from the planned goals; although the lack of progress on unit testing and data model efficiency was starting to become quite apparent [i.e. compared to other dbt projects in VGo].

Question2:

Previous feedback on improvements often revolved around building and improving data the efficiency of models, pipelines, dashboards. This quarter you spent a bit more time on this than past quarters, evaluating which models could benefit from required partition filters, and implementing those.

Q3

In Q3, you continued to improve the observability capabilities over our financial data by creating a new dashboard which helps surface holes in our mapping and classification logic. The level of detail and visibility we have over our data has never been greater, to a large extent due to these continuous improvements and additions that you implement.

You spent more time on performance optimisations that had been proposed in Q2; namely making some of the larger join-models incremental. This resulted in considerable improvements on the cost side of over a TB/day. This was a long-needed improvement over the existing **table**materialisation strategy. However, the implementation is still not a completely long-term solution, with the incremental window of 1 year still being considerably big and several models still

- Conducting user interviews to understand documentation and discoverability needs.
- Helping to build the pipeline for extracting and transforming run results, contributing dbt expertise.

This project required close co-creation with Data Engineers from the Data Platform Experience team, where I represented the perspective of an Analytics Engineer to ensure usability for data consumers.

It's an ongoing initiative that demonstrates 'We Grow' - building shared understanding and improving governance across our data ecosystem.

3. Visibility on Reported Results

I implemented a [dashboard](#) to monitor key transformations - including marketplace verticals and carrier mapping - to help Finance and Analytics teams proactively identify missing or misclassified data.

This enables faster resolution of data quality issues and supports a shorter month-end closing cycle by ensuring complete, accurate data earlier.

While the current setup still relies on manual checks, there's an opportunity to automate alerts and enhance documentation so that missing mappings can be addressed more quickly.

This work reflects We Care and We Take Ownership - preventing issues

processing close to or even above 1TB/day [making them the most expensive in the BU] (i.e. mart invoice cost and revenue, mart_prep_carrier_invoices_shipment_leg
That aside, you've made good progress in the right direction here, to reduce the ever-growing costs of the project.

You also took initiative and created two new Looker dashboards which allow one to understand where looker views are used, and by whom. Both of these are super helpful tools and are actively used by folks throughout DSA. Relatedly, you recognised their potential usefulness to others and shared about them in a knowledge sharing session. This was a nice example of taking ownership and co-creation beyond your immediate scope of ownership: you gathered input and feedback from the guild to create self-service tools that benefit all of DSA. Your efforts were also rightfully recognised i.e. through the feedback you received from our Staff AE and the data platform team lead. I agree with their feedback fully that this is a good example of finding time to work on long-term impact projects and aiming high.

Another project you worked on this quarter was the Data Catalog; you collaborated with the data platform team to define the goals of the project, gather input from future users, and made hands-on contributions, too (setting ownership for all dbt projects in code for example). Your work on this project was a good example of co-creation, as you effectively collaborated with data engineers to create a better-working product than either one party could have implemented by themselves.

Last but not least, you [finally ;)] started making progress on increasing the [previously abysmal] unit test coverage

before they grow and ensuring data integrity across financial reporting.

rate in vgo_finance, leading to an improvement from 0.4% to 8,5%!

Reflection Question 2 & 3

How were the insights from feedback and learning applied *this quarter*?

Manager Evaluation

Response: In previous quarters and in our 2024 annual reflection, I had shared feedback that you need to start spending a bit more time thinking about the long-term state of the finance project, in particular when it comes to scalability and cost. Most of our models have been implemented as tables for simplicity, and we had not revisited this. In Q3, you made good steps in the right direction by implementing more scalable configurations for some of the largest tables in the dbt project. You also had struggled juggling a large number of quarterly goals in past quarters, leading to many smaller goals being dropped throughout the quarter as a result of frequent re-prioritisation, and adding pressure on yourself, and a sense of underaccomplishment. The last 2 quarters you were more thoughtful about what is truly important to have as a goal, and what can be done “on the side” if time permits. This is definitely an improvement and also allows us to have better alignment on your key priorities for the quarter.

Employee Evaluation

Response: This quarter, I applied feedback from peers and stakeholders by focusing on collaboration, early iteration, and openness to improvement. For example, when developing the Looker dashboard usage monitoring tool, I sought feedback early and incorporated suggestions from guild members to make it more actionable and user-friendly.

Similarly, input from the Data Catalog implementation discussions helped me clarify ownership structures and improve documentation so that accountability became more than just a label. These experiences reinforced the value of co-creation - that sharing early, even if something isn't perfect, leads to stronger outcomes and greater trust across teams.

Looking ahead, what actions would enhance the impact in the upcoming quarter?

Manager Evaluation

Response: In Q3 you found a really good balance between finance priorities, technical/optimisation priorities, and DSA priorities. Seeking out more such mix of cross-cutting projects is a good way to create impact beyond your immediate

Employee Evaluation

Response: Building on this feedback, I plan to take a more iterative and experimental approach - testing ideas earlier and using feedback loops to refine faster. I'll also look to scale the principles behind successful projects like the Looker

domain, and learn and grow. You are well-positioned to repeat the successes of this quarter in future quarters [in particular because our stakeholder priorities are in general “fewer” than in product domains which leaves quite a bit of flexibility to focus on other impactful work].

dashboard and Data Catalog by automating monitoring, improving documentation, and sharing learnings across teams.

Finally, I want to continue aiming high by taking ownership of cross-domain initiatives that have lasting impact, while keeping collaboration and inclusivity at the core of how I work.

Inconsistent Impact Flagging

For this quarter, was the team member's impact in line with expectations for their role and Quarterly goals?

Your answer will be visible to your team member once you submit the form, please plan the timing of the form submission and discussion accordingly.

You can click on "Save for later" below to save your draft without sharing visibility to your team member. It is recommended to communicate an Inconsistent Impact Flag during the one-to-one discussion.

Please note that flagging someone as inconsistent is a proactive step to highlight areas where they should course-correct. It's a reminder for leaders to provide additional support to help the team member work towards becoming impactful next quarter.

No automatic processes are initiated from this flag; it is solely for awareness, visibility, and alignment purposes between the team member and the team lead.

Manager Evaluation

Rating:

In line with expectations
