Q4: Review previous individual goals

Clearing tech debt

Due Date: 31.12.2025 Status: Done Completion Date: 31.12.2025
Category: Impact Goals

Cost Control for VGo Finance

Due Date: 31.12.2025 Status: On Track Completion Date:
Category: Impact Goals

Price list migration to admin tool

Due Date: 31.12.2025 Status: On Track Completion Date:
Category: Impact Goals

Privacy implementation of PII (Postal Codes)

Due Date: 31.12.2025 Status: Cancelled Completion Date:
Category: Impact Goals

Successful onboarding of DSA Academists for 2025 Q3 Intake

Due Date: 31.12.2025 Status: Done Completion Date: 30.11.2025
Category: Impact Goals

Vinted Go as an invoicing entity

Due Date: 31.12.2025 Status: Done Completion Date: 31.10.2025
Category: Impact Goals

Q4: Reflection Question

Please provide 2-3 examples of the impact created *this quarter*.

- What was achieved?
- What was missed?
- How did the actions align with Vinted's values?

Manager Evaluation

Response: Overall it was a good quarter:

- You took initiative and ownership in the **price list migration** project, defining the success metrics and providing continuous and practical feedback to the PM and others. Your involvement and engagement were [and are] pivotal in the project.
- you were involved in the **VGo-as-invoicing-entity project**, ensuring we have the new revenue recognition logic is implemented in our mart(s).
- you made a visible dent in the **unit testing coverage** in the vgo_finance project. While the tests were mostly based on the relatively simpler models (e.g. staging), it's still a significant achievement to reach 50%+ coverage (previously only 2 models were covered, ~1% or less). It also helped us uncover some bugs.

You took ownership and initiative and made several improvements to our team's processes and workflows:

- adding agent instructions to the repo, extending those with unit testing examples while you were working on the vgo_finance unit test implementation.
- significant additions and **improvements to**

Employee Evaluation

Response: I contributed in several areas:

- **New products:** Modelling data from the price list admin tool, and coming up with a new way to recognise revenue. I had also helped to propose metrics, which was out of my comfort zone, but provided an excellent opportunity to learn.
- **Helping onboard academists:** I contributed to the development of materials for new academists who joined Vinted through multiple onboarding sessions - introduction to Vinted's Data Stack, dbt, Looker. These are sessions which were **co-created** together with Vaiva and Vytautas. We did not have content for them prior and needed to come up with them from scratch.

the Operational Review. You made enhancements to what we track and how. To an extent, the changes may have been too many and, in some cases, too manual to be immediately scalable, but it's great that you took initiative to propose those, and we'll iterate on them as a team. In particular, logging the failure reasons during the month was a very practical suggestion which will help us compile the review document faster. You also took ownership in reminding everyone to fill it out throughout the month.

You presented at an external conference together with Justina. This put you a little bit outside of your comfort zone, but it ended up being a success!

Last, you contributed to the **Academist program** — from creating and updating the materials for newjoiners to participating in onboarding sessions.

The main "miss" being the **continuous growth of costs** in the project (both in the project as well as through inefficient exposures in Looker).

- **Clearing tech debt:** I helped to raise the domain's unit testing coverage to 50% of models over 4 weeks. I **aimed high** - in the sense where I wanted to create something which could be used by others, but also involved less manual efforts. So in doing so, I managed to use Agentic AI to help with mocking data for tests. I also created an instruction sheet which was used successfully by others (Arabella, Quirine) to create their unit tests too.

In terms of what was missed:

- The costs had gone up - more could be done to proactively monitor query usage and cost control. It seems to be a recurring theme for 2025.
- There are many tasks which entered the backlog. These were requests which piled up because other tasks took a greater priority. I want to focus more grooming in the next quarter.

Q4: Inconsistent Impact Flagging

For this quarter, was the team member's impact in line with expectations for their role and Quarterly goals?

Your answer will be visible to your team member once you submit the form, please plan the timing of the form submission and discussion accordingly.

You can click on "Save for later" below to save your draft without sharing visibility to your team member. It is recommended to communicate an Inconsistent Impact Flag during the one-to-one discussion.

Please note that flagging someone as inconsistent is a proactive step to highlight areas where they should course-correct. It's a reminder for leaders to provide additional support to help the team member work towards becoming impactful next quarter.

No automatic processes are initiated from this flag; it is solely for awareness, visibility, and alignment purposes between the team member and the team lead.

Manager Evaluation

Rating:

In line with expectations

Response:

Annual Impact Reflection Questions: WHAT

Summarise the top 3-5 outcomes/achievements that best represent your impact this year.

Manager Evaluation

Response: Primarily, all **key priorities set by the FDC team were met well**. Whether it's updates to reports, building out the new revenue recognition logic, supporting the price list migration (more on the VGo Finance side, yet directly impacting the quality of data we provide to FDC). In addition [in particular], you made a significant revamp of the invoice completeness alerts which are now more timely and useful, resulting in more accurate data we use for reporting.

You also contributed to **initiatives impacting our entire guild**:

- you contributed to the Data Catalog initiative from day 1. Your contributions were valuable and welcome, as is evident from the feedback you received from the Data Platform team
- you took initiative and developed datasets in Looker to explore Looker asset usage (dashboards, explores). This has been a very handy and useful resource that is being used more and more every week.

You led **people growth projects**

- you planned & led the hiring process for an Intern (the first AE intern). Unfortunately, it did not work out, but you did everything right and the outcome was outside of your control.
- you volunteered for the Academist program. While you didn't yet lead an academist this year (will happen next year), you made a number of contributions to the initiative (revamping onboarding materials, leading onboarding sessions, updating homework etc.)

You created impact and visibility for Vinted beyond Vinted by leading the dbt Meetup at the Berlin office as well as presenting at the Forward Data Conference.

Employee Evaluation

Response: **Finance Data Control:**

Supported the team with their requests and new products which were launched. For example, the price list migration to admin tool, VGO as an invoicing entity, amongst other reporting use-cases which came up throughout the year.

There are optimisations done. This was also documented and communicated. However, it did not achieve the impact that we wanted.

Observability:

Created some data products which are used by stakeholders to understand the state of data quality:

- Redoing Looker executions data in Dataverse (picked it up), in the process enabling us to see our costs from Looker and drill-down
- Invoice completeness alerts - much faster and actionable insights into invoice quality, closing the feedback loop a lot quicker
- Improving the format of the operational review to make it more readable.

Investing in People and Knowledge Sharing:

This is something I still care deeply about, and believe it creates scalable impact:

- Shared our testing strategy at a Conference (Forward Data Conference) - great for employer branding.
- Hosted a dbt Meetup in Vinted, being able to enable knowledge sharing.
- Redesigned Analytics Engineering homework for IC0s
- Redesigned DSA Academy homework

- Opened and planned to hire an Analytics Engineering Intern (first-ever for Vinted!)
- Conducted 3 onboarding sessions for DSA Academists (creating material from scratch)
- Handed off Knowledge Sharing sessions to another person successfully (continuity)

Also very happy to be recognised as one of the nominees for "AE of the Year".

Share here what you missed or didn't fully meet, reflecting on the key learnings from it.

Manager Evaluation

Response: Two things stand out as misses for the year:

1. **Cost management did not significantly improve.** While some effort was [well documented and] carried out in the summer, its effect was short-lived and limited. We've also recently discovered (thanks to the Looker usage dashboard you created) that VGo Finance data is also quite expensive in Looker. This is an area we need to make a visible improvement on next year.
2. While you increased the unit test coverage in vgo_finance dramatically, the most complex marts and models remain untested (i.e. those with most joins and aggregations). This is an area you should continue working on next year

Employee Evaluation

Response: Despite our attempts, the costs for our domain (VGo Finance) are still going up. We applied some common strategies to control the cost, but it's clear that more needs to be done to tackle this in 2026. The good news is that I think we've learnt from the changes that we've done in 2025 and that we are in a better state to explore how to tackle cost optimisation, taking into consideration the way our users use our data.

Annual Impact Reflection Questions : HOW

Summarise 3-5 specific examples of behaviours/situations that best demonstrate how you lived by Vinted Values this year.

Manager Evaluation

Response: You regularly demonstrate all our values. For example:

you **aim high**, striving to be better today than you were yesterday. This extends to your work as well. Our alerting for issues related to invoice uploads was limited, so you took it upon yourself to design and implement a more robust solution.

you **take ownership**, diligently and thoroughly investigating and questioning

Employee Evaluation

Response: **We aim high:** When creating the completeness alerts, I wanted to improve on the way we were doing things and strived to give the team something that was actionable, always wanting to improve

We care: When faced with a difficult situation (Lead of Finance Data Control from Jul-Oct), I stood in solidarity with the team and checked in regularly to keep the spirits up and make sure everyone was ok.

everything until you have a complete understanding of a topic/issue. An example of this behavior is your involvement in the price list migration where you consistently raised and proactively alerted stakeholders and PM of various risks and issues.

you **co create**. An example of this is your contribution to the Data Catalog initiative. You worked well with Data Platform colleagues but also more broadly in DSA to understand the requirements and contribute to the success of the project

We co-create: I particularly enjoyed having to create the onboarding material with Vytutas and Vaiva from scratch. Allowed us to have a good sense of co-creation.

We grow: I pushed the conversation on growth for everyone and shared resources to help others.

We take ownership: Whenever I see a problem, I try to fix it. For example, the Looker executions models was born out of me wanting to take ownership for something which was out of my sphere of influence but could contribute in.

Share here examples of behaviours/situations you found challenging or where you believe you could have more strongly role modelled our values.

Manager Evaluation

Response:

1. The cost optimisation work was one of the rare situations where you did not aim high enough. While you planned and executed an optimisation, it was really not the significant improvement we wanted to achieve. You did not prioritise further work for the rest of the year on this topic.
2. You should be more conscious of achieving a better work/life balance. For example, you often actively work on weekends, posting PRs and other contributions, reviewing PRs and fixings failing DAGs from our domains but also engaging with MP domains and others. While your intentions are noble, this is not exactly exemplary behavior, because it first makes it difficult for you to recharge properly; but secondly it sets a poor example to other team members of expectations we do not want to normalise.
3. Related to the above, I believe you often have too many *very diverse* topics you are engaged with concurrently. Looking ahead to next year, I think the most impactful lever at your disposal is greater focus on fewer topics at a time.

Employee Evaluation

Response: **We grow:** I would like to narrow down and focus on areas for development in 2026.

Annual Impact Reflection: Open Space

(Optional) Use this space to share additional information that you believe is important to share and consider when reflecting about this year. You can also include here feedback received outside Workday or feedback from your Value Creation Manager, when relevant.
